

Water Technologies & Solutions

ChemSure* chemical delivery services: expert, professional, at your service

ready for the resource revolution

simple, worry-free operations with ChemSure

At SUEZ Water Technologies & Solutions, we understand that your time and money are valuable. When it comes to scheduling chemical deliveries, allocating sufficient time and resources while sustaining everyday operations is not only vital, but also a huge burden to bear. Factor in supplier reliability, environmental considerations, as well as delivery, handling, labor, and disposal costs, and it's easy to see how complexities can arise.

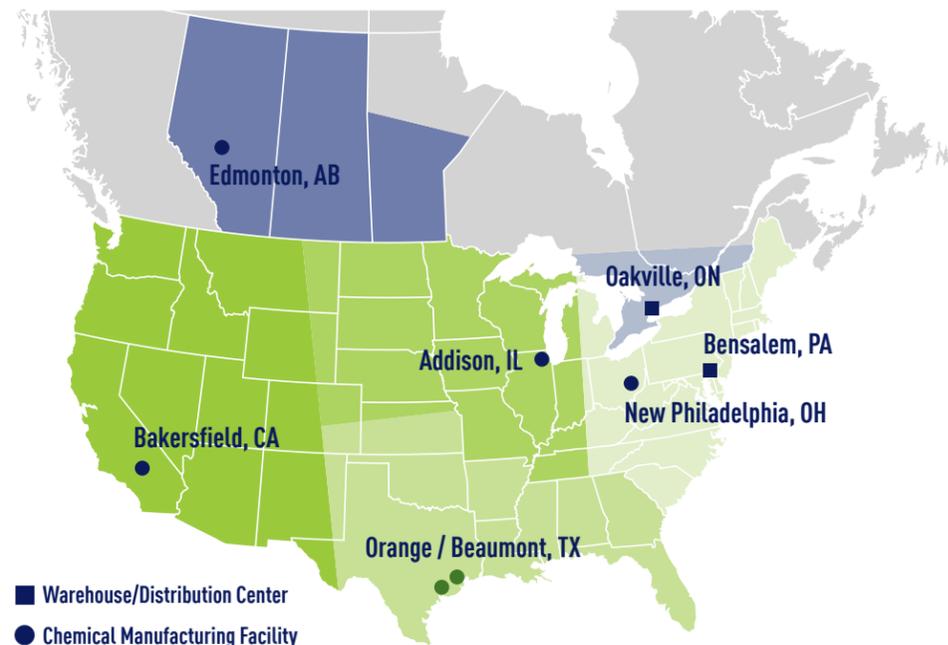

SUEZ understands your need to streamline chemical operations whenever and wherever possible. We offer the ChemSure Delivery Service, certified to deliver chemical solutions in a safe, professional, cost-efficient, and timely manner, all while abiding by your site's specific rules and regulations.

commitment to professionalism, safety, and excellence

The ChemSure fleet, an operation of more than 40 experienced chemical Delivery Specialists and 110 fleet vehicles, has been a "best-in-the-business" source of chemical delivery for more than 50 years. Our team operates out of five chemical manufacturing facilities and two strategic warehouses to ensure holistic coverage in the United States and Canada. All of our Delivery Specialists are trained to ensure compliance with various chemical handling and safety regulations (HAZMAT, Department of Transportation, etc.) and are guaranteed to meet your site-specific requests.

We treat each delivery like it's your first. Rest assured that a ChemSure Delivery Specialist will:

- Sign in and out at the customer site per your company's policy.
- Follow all pertinent safety guidelines per the customer's instructions, including fulfilling permit requirements and personal protective equipment (PPE).
- Inspect tanks, inventory, pumps, and hoses, prior to delivery, to avoid leaks, spills, and product contamination.
- Continually monitor tanks and chemicals during delivery to avoid overfills and leaks.
- Wash hoses and pumps after each delivery to avoid contamination.

24/7 customer support for improved planning

Additionally, we provide an around-the-clock team of inventory planners to support order placement, scheduling, and inventory management needs. Our team can help coordinate any order adjustments, providing you with complete flexibility and control of your operations.

flexible delivery options at a fair cost

One size doesn't always fit all, so SUEZ offers a wealth of delivery options designed to meet your business' individual operational needs. Based on the program and usage rates of the application, SUEZ provides various tanks sizes to accommodate 100 days of inventory or truck load quantities to accommodate a quarterly delivery schedule.

Our ChemSure offering provides several unique services, each designed for delivery efficiency and flexibility. Depending on your chemical requirements, product demand, and available footprint, we will create a cost-efficient delivery solution for your business and ensure that your chemical needs are met on an ongoing basis.

Our customized deliveries are transported via our own fleet of specially designed trucks. All deliveries are transferred directly to tanks that are housed in containment basins, which means you do not have to worry about spills or leaks.

service types

- Bulk volumes
- NAM wide coverage
- Best cost option

- Semi bulk volume
- Full tote pump-off
- Weekly rotation schedule

- Small Volumes (30+gal)
- Partial tote pump-off
- Weekly rotation schedule

monitor your investment with InSight*

Once you have your chemicals on-site, understanding the rate of consumption and inventory is crucial. Confirming chemicals are not being over- or under-fed, avoiding "run-out" situations, and effectively managing inventory have traditionally been performed manually and can be inaccurate, infrequent, and time consuming.

SUEZ's InSight Asset Performance Management solution combines data and analytics to help water treatment assets operate at optimal performance. Its Inventory Management feature can actively monitor chemical consumption and delivery using tank-level sensors that collect key data points – including chemical level, feed rate, last fill date, and days remaining – and securely transmit them into the tool for visualization and trending. InSight can also automate inventory reorder and replenishment through integration with your ERP systems, helping to avoid run-out situations and unnecessary expense.

By combining InSight with our ChemSure program, you can:

- Turn data from multiple sources into meaningful information
- Minimize the potential for product run-outs
- Ensure timely scheduling of chemical deliveries
- Maintain on-budget performance: detection of chemical over/under usage

Your SUEZ representatives can assist you in defining the best application and utilization of InSight to optimize your chemical inventories and ensure run-outs are a thing of the past.
